

SUMMARY OF LIGHTNING LAWN CARE PROGRAM APPLICATIONS

1. Early Spring *Granular fertilizer w/pre-emergent, broadleaf weed control*

Purpose: To establish a pre-emergent herbicide barrier in the top of the soil and to provide a light early spring feeding.

2. Late Spring *Granular fertilizer w/pre-emergent, broadleaf weed control*

Purpose: To strengthen the pre-emergent barrier in the top of the soil and provide an additional light feeding.

3-4 Early Summer *Granular slow-release fertilizer with grub control, combination application*

Purpose: A preventative grub control to prevent late summer grub feeding damage and to provide a slow, light feeding to carry your lawn through the summer.

5. Early Fall *Balanced granular fertilizer*

Purpose: To feed grass and stimulate good fall color, improve turf density, and promote growth of the root system to help fill-in thinned areas from the summer stress.

6. Late Fall *High nitrogen granular fertilizer*

Purpose: To promote healthy root growth.

This final app's primary function is to force vigorous root production.

Nutgrass Control *Late spring-fall Optional Application*

Purpose: To control emerged Nutgrass or purple Nutsedge.

Unfortunately, there is not a pre-emergent herbicide that works on nutsedge.

Disease Control *Summer Optional Application*

Purpose: To help prevent and/or control damage from turf diseases.

This application usually must be scheduled prior to the outbreak of turf disease.
